Operating Instructions

Congratulations on the purchase of this LIMITED EDITION of Supernatural – Germanium at its Finest™. We're sure with just a little adjusting of the controls you'll find the right settings to achieve fabulous guitar tones with just about any guitar/amp combo. For the sound clip on our website, the controls were set at: Volume at 11:00, Tone 1 at 2:00, Tone 2 at 10:00, Gain 1 at 5:00, and Gain 2 at 7:00. The layout of the controls look like this:

- | | |
|--------|---|
| Volume | Controls the output level of the pedal. |
| Tone 1 | This is the main bass to treble tone control. |
| Tone 2 | This control is used to compliment the setting of Tone 1. I use it to shave off the treble just a little, while still retaining a wide spectrum of guitar tone. |
| Gain 1 | This is the cleanest gain control used in overdriving the amplifier. |
| Gain 2 | This control will bring in more gain and distortion. |

Another setting I like to use for the Gain controls, is: Gain 1 set at 5:00 with Gain 2 set at 3:00.

CAUTION: Be very careful not to use too much volume because your hearing may become damaged. Also, do not overdrive your amplifier too much because this can result in damage to your amplifier. Do not operate this pedal with the bottom cover removed. Prescription Electronics, Inc. cannot be held liable for misuse of this product.

This pedal operates only with a 9-Volt Battery. Do not attempt to use any other power source. Any damage to this product by incorrectly powering the device or any other form of misuse or abuse will void the One Year Warranty.
